

Day 2 Task

Mini Project: TODO List

Create a small TODO List application using JavaScript, HTML and CSS.

Requirements:

1. Ask the user to enter their name. You may use either: a `prompt()`, or an input field on the page. 2. The page title should become:

[User's Name]'s TODO List

3. Add an input field for entering tasks.

4. Add two buttons: **Add**: adds the task to the list. **Clear**: removes all tasks from the list. 5. Each added task should appear as a list item (`<li>`) with a button next to it named **Done**.

6. When the user clicks **Done**: The task should move to the bottom of the list. The task text should have a line-through effect. **Bonus (optional)**: Prevent adding empty tasks. Allow pressing Enter to add a task.
